SUMMARY

Highly motivated Data Science and Gen-AI developer with hands-on experience in building and deploying AI driven applications, RAG systems and deep learning models. Skilled in leveraging LLMs, data pipelines, and automation techniques to deliver scalable, production-ready AI solutions.

EDUCATION

Electronics Communication Engineering 9.24 CGPA NGR Institute of Technology Relevant coursework:	Graduated May 2024
Intermediate(MPC) 99.00 CGPA Free Chaitanya Junior College Relevant coursework:	Graduated April 2019
CBSE 9.8 CGPA Firewood High School Relevant coursework:	Graduated May 2017
TECHNICAL SKILLS Languages: Python,SQL	

Cloud: Azure cloud services, Snow flake
ML/DL: TensorFlow, PyTorch, Keras, Scikit-learn, CNN, RNN
Computer Vision: OpenCV, Image Recognition, Video Analysis, Yolo
LLM RAG: Lang Chain, Lang Graph, Google Gemini LLMs, Prompt Engineering, Generative AI, RAG. **Tools Platforms:** Fast API, GitHub, Colab, VS Code, Streamlit

MOST PROUD OF

- IBM Data Analysis with Python-Cognitive duration=April 2026, :**
- Completed an 11-course professional program covering AnalyticsExcel, SQL, Python, Data Visualization, and Business
 - Built interactive dashboards using Cognos Analytics and Excel
 - Performed data analysis using Python, Jupyter Notebook, and SQL
 - Completed a capstone project analyzing real-world datasets
 - Credential Verification:<https://courses.cognitiveclass.ai/certificates/4b57ac4063da4e7796af89dfc43b0aa1>

PROJECTS Intelligent AP-Powered CCTV Surveillance System June 2025

- Developed a high-performance video analysis system using Fast API and OpenCV to process CCTV footage.
- Integrated with Gemini(LLM) for high-confidence security event detection and timestamp verification
- Automated alerts with frame visualizations are delivered via SMTP email notification.

- Built a hybrid CV + LLM validation layer where OpenCV performs initial detection and Gemini verifies contextual anomalies.
- Structured the system for scalability by decoupling video ingestion, processing, and alerting into independent components, enabling future deployment with message queues or microservices.

Research Assistant Bot End-to-End LLM Application

July 2024

- Developed an end-to-end multimodal RAG system using Fast API, Gemini and Pinecone.
- Built a fully automated ingestion pipeline that extracts text, tables, images, and formulas from PDFs.
- And converts them into searchable embeddings.
- Implemented intelligent retrieval with accurate table reconstruction, citation handling, and optional image rendering.
- Designed a production-ready architecture integrating Azure Blob Storage, async processing, and vector based search.

AI Travel agent using Lang Graph

October 2025

- Built an AI-powered travel planning system using Fast API, LangGraph, and Google Gemini to generate personalized itineraries, hotel recommendations, cost estimates, and sightseeing plans dynamically.
- Engineered a structured multi-step workflow (profile analysis → hotel selection → attraction curation → budget evaluation → final plan) to deliver coherent, end-to-end trip plans.
- Implemented clean API end points and UI integration for real-time trip generation, improving response quality through prompt-driven LLM orchestration.
- Reduced itinerary generation latency by structuring parallelizable steps within LangGraph, improving response time for real-time user queries.

BUSINESS ANALYSIS SKILLS

- Strong Analysis Problem Solving Ability
- Critical Thinking Troubleshooting Skills
- Ability to Work in Fast-Paced Global Environments
- Experience Supporting Data-Driven Decision Making

INTERPERSONAL SKILLS

- Strong verbal and written communication
- Time management and organization skills
- Collaboration and Teamwork
- Creative Thinking and Initiative
- Ability to learn New Technologies Quickly

CERTIFICATIONS

- Data Analysis Certification – OneRoadmap (2026)
- Microsoft excel to power BI - LinkedIn
- Data Analysis Essentials – Cisco Networking Academy (2026)

- Data Analysis Job Simulation – Deloitte (Forage)
- GenAI Powered Data Analytics Simulation – Tata Group (Forage)
- Natural Language Processing for Developers – Infosys Springboard
- AWS Cloud Foundations – AWS Academy
- AWS Machine Learning Foundations – AWS Academy
- Artificial Intelligence & Machine Learning Internship – AICTE EduSkills

TOOLS PLATFORMS

- Jupyter Notebook • MySQL • Google colab • VS Code • Pandas • n8n • Cursor AI
