Career Objective

Motivated Data Science and Generative AI Developer with hands-on experience in building and deploying AI-driven applications, RAG systems, and deep learning models. Skilled in leveraging LLMs, data pipelines, and automation techniques to deliver scalable, production-ready AI solutions.

Technical Skills

Languages: Python, SQL

Cloud: Azure cloud services, Snowflake

ML/DL: TensorFlow, PyTorch, Keras, Scikit-learn, CNN, RNN

Computer Vision: OpenCV, Image Recognition, Video Analysis, Yolo

LLM & RAG: LangChain, LangGraph, Google Gemini LLMs, Prompt Engineering, Generative AI, RAG.

Visualization: Matplotlib, Seaborn

Tools & Platforms: Fast API, GitHub, Colab, VS Code, Streamlit

Projects:

Intelligent AI-Powered CCTV Surveillance System | OpenCV, Gemini Vision, Fast API

- Developed a high-performance video analysis system using **FastAPI** and **OpenCV** to process CCTV footage
- Integrated with **Gemini(LLM)** for high-confidence security event detection and timestamp verification
- Automated alerts with frame visualizations are delivered via **SMTP email notification**

Research Assistant Bot – End-to-End LLM Application

- Developed an end-to-end multimodal RAG system using Fast API, Gemini, and Pinecone.
- Built a fully automated ingestion pipeline that extracts text, tables, images, and formulas from PDFs and converts them into searchable embeddings.
- Implemented intelligent retrieval with accurate table reconstruction, citation handling, and optional image rendering.
- Designed a production-ready architecture integrating Azure Blob Storage, async processing, and vector-based search.

AI Travel agent using Lang Graph

- Built an AI-powered travel planning system using Fast API, LangGraph, and Google Gemini to generate personalized itineraries, hotel recommendations, cost estimates, and sightseeing plans dynamically.
 - Engineered a structured multi-step workflow (profile analysis → hotel selection → attraction curation → budget evaluation → final plan) to deliver coherent, end-to-end trip plans.
 - Implemented clean API endpoints and UI integration for real-time trip generation, improving response quality through prompt-driven LLM orchestration.
-

Education

B. Tech – Electronics & Communication Engineering

TVK Institute of Technology | 2019 – 2023
